XML

JSON

JIRA

Experienced Java Developer with over 4 years of experience in Enterprise Software Development. Excellent reputation for resolving problems and improving customer satisfaction.

Work History

2022-08 - Current

Developer

Logic Information Systems

- Collaborated with project managers and team leads to determine ambitious but realistic coding deadlines on updating project code bases.
- Tracked task progression with issue tracking software JIRA.
- Updated code bases with GIT and Bit Bucket.
- Participated in training with retail consulting and enterprise retail software to assist with potential client migrations.

2021-10 - 2022-08

Application Developer

Highmark

- Took the lead in determining point estimates for client requested application enhancements across 10+ projects leading to successful implementation
- Provided assistance to recently hired developers by delivering methodologies to monitor recently deployed application changes to view any errors
- Enhanced configuration management and application versatility by following Java and JSON standards defined by organization to develop application changes for 10+ applications
- Quickly responded to 10+ production issues that occurred across multiple applications and determined root cause of error and coding effort required to mitigate the issue.

2019-10 - 2021-10

Associate Application Developer

Highmark

- Successfully coded and implemented a new Interactive Voice Response
- System to allow call center agents to call in and request time off saving time needed to alert

- supervisors
- Took part in 24/7 on call rotation to support the resolution to the root causes of 100+ high and low priority tickets
- Worked under the direction of senior developers to derive agile point estimates for the successful delivery of 50+ project upgrades
- Participated in 50+ code reviews to discuss best coding practices for a successful project release implementation and minimized application errors.

**2018-09 -
2019-10**

Application Developer, Worker

Highmark, Contract with Computer Aid

- Developed reporting feature for existing application using Java, SQL, HTML and CSS to provide details regarding failed payments of members daily
- Coded 100+ JUnit test cases to ensure optimal application performance and to support code coverage requirements defined by organization
- Utilized Java coding skills to enhance application performance by implementing error handling methods across 10+ application scheduled jobs
- Participated in Daily Scrum meetings to effectively communicate project progression and alert any critical impediments that occur within development stage.
- Maintained and repaired facilities, equipment and tools

Education

**2020-08 -
2022-12**

M.S: Information Systems

The Pennsylvania State University - Harrisburg

**2014-08 -
2018-08**

B.S: Information Science and Technology

The Pennsylvania State University - Harrisburg, PA
